Desktop installation guide

File formats: OpenType (.otf) for macOS and Windows desktop software.

On a Mac

To activate a font, simply drag the font files into the Fonts folder, which is located inside the Library folder here:

```
Macintosh HD > Library > Fonts
```

Alternatively you can install the fonts with Font Book, a free application with macOS. More information can be found on the support section of the Apple website.

On a PC

Windows 7–10

Right-click the font files and select "Install" from the drop-down menu. In order to access the newly installed fonts, you have to re-start any application you've been using.

Note that this "Install" function will create a copy of the selected fonts in the system's "Fonts" folder.

Windows XP

From the Start menu, select the Control Panel and double-click on the "Fonts" folder icon. Here, select "Install New Font" from the File menu and navigate to the folder containing the fonts. Once there, the fonts appear in the "List of Fonts" field. Select any you wish to install, making sure the "Copy Fonts to Fonts Folder" box is checked and press "OK".

In order to access the newly installed fonts you have to re-start any application that you have been using.

Web usage guide

File formats: Web Open Font Format (.woff and .woff2) for all modern browser platforms.

CSS @font-face

Upload .woff and .woff2 web fonts to your web server.

Copy the code snippet example below into your CSS file to address your web fonts. Replace the example file URL with the appropriate path to the font files on your server.

```
@font-face {
    font-family: 'FontName';
    src: url('PATH/FontName-Regular.woff2') format('woff2'),
         url('PATH/FontName-Regular.woff') format('woff');
}
```

HTML embed

You can reference your font family in CSS font stacks by the name you gave it, in the same way you would for a system font.

```
html-element {
    font-family: 'FontName', sans-serif;
}
```

Font file hosting

Our web fonts are licensed for self-hosting. The .woff and .woff2 font files should be hosted on your server, in the same way that any supporting images are served to your website. No additional tracking code or JavaScript modules are required to load Arillatype font files.
